

7 STEPS TO INCREMENT / DECREMENT BUTTONS

using Spreadsheet Converter

John Tonkin, Brain in a Box Pty Ltd, 2013

www.braininabox.com.au

Glassware	minus	0	plus
Throw-in	minus	0	plus
Books	minus	0	plus
Port-a-robos	minus	0	plus

Cell Name="gw_1"

1. In Excel, create 4 columns for each item and populate as shown.
2. Convert the sheet, then open the .htm file in Dreamweaver.
3. Global replace* 'minus' with `<input type="button" id="minus" value="-" onClick="incr_val.value = (incr_val.value-1)">`
4. Global replace* 'plus' with `<input type="button" value="+" onClick="incr_val.value = (+incr_val.value+1)">`
5. Locate item (eg. Glassware) & replace 'incr_val' with respective name (eg 'gw_1').
6. Repeat for all other items.

* with care, after checking with Find Next ...

Glassware	minus	0	plus
-----------	-------	---	------

```

<td class='ee143' style='height:12pt;*>
Glassware
</td>
<td class='ee146' style='height:12pt;*>
<input type="button" id="minus" value="-" onClick="gw_1.value =
(gw_1.value-1)">
</td>
<td class='ee149' style='height:12pt;*>
<input id='gw_1' type='text' value='0' class='ee148' style='width:100%'
onChange="this.value=eedisplayFloatV(eeparseFloatV(this.value));recalc_onclick('gw_1') "
name='gw_1' placeholder="" tabindex='32' data-sheet='4' data-row='4' data-col='16'/>
</td>
<td class='ee146' style='height:12pt;*>
<input type="button" value="+" onClick="gw_1.value = (+gw_1.value+1)">
</td>

```

7. Once you've made all the changes, save the file and then switch back to Excel and share via DropBox, or simply copy the file and support folders, etc. to your website.

Enjoy the increment/decrement buttons, particularly if using an iPad, since you won't have to suffer from the no-NumLock idiocy.

Oh the joy and the pleasure...
